

Outperforming the competition with a lighter steel design that delivers a lower lifecycle cost.

NEXT GENERATION MIXER

Tougher, harder yet lighter, our new Lightweight mixer is made with a proprietary high strength steel specifically formulated for concrete mixers. This new material enables our mixer to be made lighter, resulting in increased load-carrying capacity making your daily business more profitable. In addition, we integrated the newest gearbox technology with integral hydraulic pump.

PROVEN PERFORMANCE

Time after time, The Continental Lightweight mixer has been tested – in every climate, terrain, and environment. We leveraged the testing and proven track record of HARDOX to develop a special formula for mixer application. Our internal validation and field testing confirms that our light weight steel mixer will perform at the durability levels of a heavier, conventional steel. Put simply, our Lightweight mixer boosts performance and maximizes the profitability for all your jobs.

LIGHTER WEIGHT INCREASES PRODUCTIVITY AND SAVES MONEY

Less weight means greater payload, lower costs, and higher profits for your business. Often there are weight regulations to consider as well. Our Lightweight mixer allows the ready mix company to carry more yardage during each trip, spreading carrying costs and producing greater profits per yard.

LONG LASTING BENEFITS

- Saves 2,000 pounds over a conventional mixer*
- Design integrates new optional lighter weight ZF gearbox with integral hydraulic pump
- Carry more yardage per trip, thereby spreading carrying costs over more delivered units and producing greater profit per yard
- Excellent durability in the harshest of ready mix environments
- Resists cracks and impact penetration
- HARDOX steel accepts paint well allowing fleets to display their colors
- Available exclusively through Continental Mixers dealers.

*Based on 10.5 yard mixer comparison to 1/4 inch AR steel and utilizing new ZF gearbox.
