B2W SOFTWARE

ONE Mobile Solution

DRIVING EFFICIENCY. ANYWHERE. ANYTIME

KEY BENEFITS

- Streamline communication and collaborate more efficiently
- Empower your mobile workforce with real-time information
- Reduce project risk by utilizing dashboards and reports
- Expand coverage by working connected or disconnected to the internet

FIELD CAPABILITIES

- Capture labor & equipment hours
- Capture production quantities
- Instantly analyze daily production
- Enter daily diaries (tool talks, special events, etc.)
- Create Repair Requests
- Instantly submit for approvals

MECHANIC CAPABILITIES

- Plan work orders
- Retrieve equipment repair manuals
- Retrieve equipment work order history
- Capture mechanic hours and part usage
- Attach photos to work order requests
- Request work order summary reports

Access to real-time information in the field is essential to job profitability. B2W Software's Mobile App provides field engineers with anywhere, anytime access to the information they need from any Apple or Android tablet device. As a single application, it also helps keep managers armed with the real-time information they need to make smarter, more profitable decisions.

From the field...

Our advanced mobile technology puts the power of the entire B2W Software construction management suite in the hands of your people on every job site. No matter where they are, supervisors can accurately clock workers in and out; track equipment utilization, materials and receipts; and create field logs on the go. Now it's easy to perform equipment maintenance or collect labor, equipment and production data. With real-time job status and resource information at their fingertips, field productivity is increased, and the accuracy and efficiency of every project is maximized.

...to the office

Once data is transmitted to the office, payroll staff, shop managers or management staff can review, change and approve the information and then seamlessly import it into your company's enterprise data and billing systems. Accounting no longer has to decipher handwritten timesheets or equipment work orders, manually enter information, or validate data and cost codes to produce payroll checks or invoices. With daily visibility into production, supervisors now have the ability to more quickly make course corrections while they can still change the outcome of a project.

SOFTWARE

FOR FIELD ENGINEERS
Instantly view real-time status of jobs.

FOR MECHANICS
Easily view all information necessary to complete work orders.

ABOUT
Founded in 1993, B2W Software (formerly BID2WIN Software) is a provider of enterprise-class construction solutions for the heavy construction industry. For more information, visit www.b2wsoftware.com or contact B2W Software Sales at (800) 336-3808.

Keep your equipment working efficiently

Your mechanics are always on the move. To work productively, they need fast access to equipment and repair information. Our mobile tablet app gives them the tool they need to remotely create or edit work orders, retrieve equipment manuals, capture or view photos, or access the maintenance history of a piece of equipment while on the jobsite. Streamlining the preventative maintenance and repair process saves them time, saves you money and keeps your equipment where it belongs—on the job.

Why Mobile Technology

Construction companies are under more pressure than ever to decrease costs and remain profitable. Mobile technology can provide the competitive edge you need to achieve those goals by giving your people a tool that allows them to capture information in the field and integrate it back into your company systems.

Whether a job is profitable or not often hinges on how quickly and accurately you can track costs—particularly as they relate to labor, equipment utilization, repairs and daily production. Manual processes make your field supervisors spend hours collecting and verifying information from multiple sources. A mobile solution enables them to record information on the spot, and wirelessly send it to the office. The integration of information into your management systems virtually eliminates the inaccuracies and inefficiencies of manual, paper-based processes.

THE B2W SOFTWARE ADVANTAGE

Designed and built on the ONE (Operational Networked Elements) platform, B2W is the first and only suite of construction management solutions that puts everyone in your company—from managers in the office to foremen in the field—on the same page at the same time. Separately or as one unified suite, B2W Estimate (estimating & bidding), B2W Track (field tracking & analysis), B2W Dispatch (resource management & dispatching) and B2W Maintain (equipment maintenance & repair management) offer:

- Increased operational efficiencies and accuracy for more profitable jobs
- One operational database for single point data entry that enables instant cross module resource visibility and collaboration
- Operational control through real-time dashboards with easy drill downs
- Comprehensive integration with all major accounting software packages
- Advanced capabilities between the field and the office via tablet application
- Intuitive user interface for streamlined estimating, bidding, logistics, field operations and maintenance
